GEO. COOLING & SONS,

Seed Merchants and Nurserymen,

Seed Warehouse—11 NORTHGATE STREET, BATH.

Nurseries and Rose Grounds—BATHEASTON and SWAINSWICK, near BATH.

January 1st, 1914.

GEO. COOLING & SONS send all VEGETABLE and FLOWER SEEDS Free by Post or Rail. SEED POTATOES, CULINARY ROOTS, MANURES, and GARDEN REQUISITES are sent Carriage Free when the Order, including Seeds, amounts to **20/-** and upwards.

Customers will much oblige by giving instructions as to best means of forwarding, name of nearest Station, &c., to ensure prompt delivery.

To obviate the necessity of writing the Seed Order in detail, an Order Sheet is enclosed with this Catalogue, the quantity required of each variety having only to be marked in the column left for that purpose. Care should be taken to always fill in the Name and Address; during the season many orders reach us unsigned, and much inconvenience to customers is caused by our being unable to trace the origin of such orders.

Cheques should be crossed "UNION OF LONDON AND SMITHS' BANK, LTD.," and Postal Notes and Orders made payable to GEO. COOLING & SONS, Bath. May we ask as a favour that orders for very trifling amounts be accompanied by the remittance, the trouble and expense of booking these small sums being great.

We allow a Discount of 5 per cent. off amounts above £1 paid within 14 days' date of Invoice. All Accounts are due without deduction at Midsummer and Christmas. A remittance or reference is respectfully requested from those sending their orders for the first time.

RETURNED EMPTIES.—We charge cost price for Hampers, Bags, &c., but are always willing to allow the full amount charged if they are returned to us in good condition within a month. **The name of the sender should always be written upon the address label, and we should be advised by post of their dispatch.**

Address for Telegrams—"COOLING, BATH." National Telephone—No. 10.

Our NURSERY CATALOGUE, containing Descriptive List of Roses, Fruit Trees, Evergreens, Shrubs, Hardy Climbers, &c., will be forwarded Post Free on application.

COOLING & SONS'

"Somersetshire" Collections

OF CHOICE VEGETABLE SEEDS

FOR ONE YEAR'S SUPPLY.

THE following Liberal Collections are carefully arranged to produce a succession of Vegetables throughout the year. They are especially suited to those who, not keeping a professional gardener, are at a loss in compiling a suitable list. Each article is given in its proper proportion, and none but well-known and prolific varieties are included. We send out a large number of these Collections to all parts every year, and they invariably give very great satisfaction.

From H. E. Rorke, Esq., South Croydon.—"Your seeds have produced capital results, in many instances almost every seed appears to have germinated."

VEGETABLE SEEDS

GARDEN PEAS.

CULTIVATION.—Peas do well in any good garden soil, but thrive best in ground deeply trenched and manured or a previous crop. Sow about an inch and a-half deep in double rows 6 or 8 inches apart. It is also a good plan to sow in trenches wide apart, with some other crop between ; by this means both sides of the rows get the full advantage of light and air, while the trenches are convenient for watering in dry seasons. They should be kept clean from weeds and earthed up twice in their growth. The height to which peas will grow in a great measure depends on the richness of the soil and the wetness of the season. The large wrinkled varieties are the sweetest and most delicately flavoured, but are not so hardy as the dwarf sorts, and therefore not so well adapted for small gardens. Those growing 3 feet high should not be nearer each other than 3 or 4 feet, and have stakes or bush for support. For an early crop a sowing of the *Earliest* varieties may be made in November, December, and January—they are hardy, and frost will not harm them. Sowings of *Second Early* varieties may be made in February, and the main crops in succession from March to the end of May. Late sowings for Autumn crops may be made, according to the season, until the early part of July. Peas should be gathered as fast as they become fit for use.

Earliest Varieties.

Cooling's Improved White Windsor is the best type of Broad Bean in cultivation.

FRENCH or KIDNEY BEANS.

CULTIVATION.—The Dwarf varieties may be sown from the middle of April to the end of July in rows 2 feet apart; if dry weather sets in water copiously. The most suitable time for sowing the tall varieties is during the month of May, in rows 4 feet wide, and the seed 2 inches deep.

COOLING'S NE PLUS ULTRA.

Dwarf Varieties.

Per quart—s. d.

COOLING'S "NE PLUS ULTRA." Selected stock. This variety has now established itself as the earliest and most productive Dwarf Bean in cultivation; it is unequalled for forcing or first sowing out of doors, being at least ten days earlier than *Osborn's* and other well-known early kinds. This fine Dwarf Bean has been awarded more Certificates of Merit by the Royal Horticultural Society after the Chiswick trials than any other variety 2 0

ASPARAGUS.

CULTIVATION.—The seed should be sown in March and April, in rows two feet apart; when one or two years old transplant into beds. In selecting a spot for an Asparagus Bed choose an open and sunny situation; as this is a crop which will occupy the same spot for several years a little trouble expended upon it in the first place will well repay itself. The soil should be trenched at least to the depth of two feet, and plenty of good rotten manure mixed with it from top to bottom. The beds may be four feet wide, with two feet alleys between; three rows should be planted in each bed, one in the centre and one on each side at the distance of a foot; the roots about nine inches apart in the rows. A dressing of salt or asparagus manure in autumn or early spring at the rate of about four pounds to every six square yards is very beneficial.

Per oz.—s. d.

CONNOVER'S COLOSSAL, an American variety, grows to an immense size, and is fit to cut two years after sowing 0 6

GIANT, the ordinary kind 0 4

GIANT ARGENTEUIL, early purple, as grown by the celebrated French growers for Paris market ... 0 6

For ASPARAGUS PLANTS, see *Culinary Roots*, page 23.

COOLING'S OMEGA.

BEET.

CULTIVATION.—Sow end of April and in May in drills a foot apart and half-an-inch deep; thin out the plants when up to 12 inches apart. A rich deep open soil is the most suitable for Beet.

Per oz.—s. d.

COOLING'S OMEGA, this highly esteemed variety is of medium size, and remarkable for handsome shape and rich crimson colour, but more especially so for its distinct flavour, which is delicately sweet and agreeable, far surpassing any kind yet offered. This variety is the original green-leaved Beet which has now become so popular with private and market growers in all parts of the country ... ...per pkt. 6d. 1 6

VEITCH'S SUPERB RED, finely formed, bright rich colour, and high quality. The foliage being beautifully coloured it is as valuable for decorative as for table use 1 0

DELL'S IMPROVED BLACK LEAVED, the best for flower garden decoration 1 0

SILVER OR SEA-KALE, the mid-rib of the leaf cooked like Sea-Kale is excellent 0 8

BORECOLE or KALE.

CULTIVATION.—Sow in March and May, the former for Autumn use the latter for Spring, in drills lightly covered with fine soil. When the plants are two inches high prick out in beds six inches apart, and when fairly sized remove them again to their final quarters, setting them in rows thirty inches apart each way. A large supply of this useful vegetable should be grown.

Per oz.—s. d.

BROCCOLI.

CULTIVATION.—Succeeds best in a substantial loamy soil. Frequent sowings are necessary during March, April, and May if a succession is required. The first crop should be got out as early as possible in June to get well established before very dry weather begins. Plant out in rows two feet apart.

COOLING'S MATCHLESS BROCCOLI.

For Autumn and Winter Use.

COOLING'S FIRST EARLY, a really choice first early White Broccoli, forming close firm white heads of very fine quality, which come into use between *Snow's Winter* and the early Cornish sorts ... per pkt. 1/

COOLING'S PERFECTION.

BRUSSELS SPROUTS.

CULTIVATION.—This much esteemed vegetable requires a long season to complete its growth. Sow in February or early in March for first, and April for successive crops; have the seedlings planted out before Midsummer. In October the plants should have additional earth drawn to the roots to support them and prevent their being injured by frost. We are particularly noted for our Brussels Sprout Seed; it always gives the greatest satisfaction.

	Per oz.—s.	d.

NOVELTY

From Mr J. Fitz Charles, Boksburg, North Transvaal.—"I received last consignment of Seeds and am more than pleased, they have all germinated so well."

CABBAGE.

CULTIVATION.—To grow good full-headed Cabbage the ground must be richly manured, deeply dug, and thoroughly worked. Sow in rich finely-raked soil which has had a good soaking of water the day before. As soon as the seedlings are well up thin out or prick them off in another bed 6 inches apart. When planted out they should stand about 30 inches asunder. Hoe every week, stirring the ground deeper, and drawing the earth up to the plants when they begin to head. A supply of Cabbage may be had all the year round by successive sowings. The first sowing should be made about the middle of March—this will give the late autumn and winter supply. Further sowings may be made at intervals on to end of July or beginning of August, which will come in for spring and summer use. The Red Pickling should be sown in August.

COOLING'S PRIDE OF THE MARKET.

Per oz.—s. d.

ONION.

COOLING'S IMPROVED WHITE SPANISH.

CULTIVATION.—To grow onions successfully the ground cannot be too rich; if possible, heavily manure and trench deeply a piece of land specially in the autumn, and leave in ridges during the winter to soften. If large Onions are required early sowing is necessary; the first or second week in February is not too early, but for ordinary crops March is the best month. Sow thinly in drills about a quarter of an inch deep and nine inches apart, keep clear of all weeds by hoeing, and if growing for exhibition thin well and give an occasional watering of liquid manure. To produce small pickling Onions the seed should be sown very thickly and on poor soil. Sow *Tripoli*, and other winter varieties during July and August.

For Spring Sowing.

	Oz. s. d.
COOLING'S IMPROVED WHITE SPANISH. This has been grown in our own seed grounds from selected bulbs for several years, and is far superior to that generally sold as *White Spanish*, being larger in size, more solid, and handsome in shape; we have grown it side by side with *Reading*, *Nuneham Park*, and others, and found it far superior, and consider it the most useful Onion in cultivation for general crop	1 6

From Mr F. Knight, Reading.—"I have grown your *Prizewinner* Onion this year 1 lb. 7½ oz. in weight and 16½ inches round."

PARSLEY.

CULTIVATION.—Sow any time between February and August, in a somewhat shady situation, in drills one foot apart, and cover with fine mould to the depth of half an inch. It usually takes several weeks to germinate. In dry weather the seed should be frequently watered.

	Per oz.—s.	d.
COOLING'S FAVOURITE, very fine, exquisitely curled, of rich deep green colour, very ornamental, and stands a long time without running to seed. We claim that this is the finest type of double garnishing Parsley in cultivation, and highly recommend it	1	0
FERN LEAF, most exquisite in form and colour, more like a crested fern or moss than Parsley	0	9
CHAMPION MOSS CURLED, a very close and finely-curled variety	0	6
EXTRA FINE CURLED	0	4
MYATT'S GARNISHING, fine curled variety...	0	6

PARSNIP.

CULTIVATION.—The Parsnip luxuriates in deep rich soil, which should be subsoiled, and the manure applied should be thoroughly decomposed; ground prepared in this manner will always produce long smooth roots. Sow in February in drills drawn eighteen inches apart, and cover with about half-an-inch of fine soil. When the young plants are about 2 to 3 inches high thin out to four inches. They are perfectly hardy, and should be dug up only as required.

	Per oz.—s.	d.
COOLING'S IMPROVED MARROW. We can recommend this variety as a great improvement; produces a very clean handsome root, and is very superior in flavour, being sweet and without the mealy taste generally found in other varieties	0	8
ELCOMBE'S IMPROVED, very superior handsome root, free from fibre	0	6
HOLLOW CROWNED, well-known first-rate variety... ... ... 4 ozs. 1/	0	4
LISBONNAIS, produces very handsome roots, a great improvement and quite distinct to the *Hollow Crowned* variety	0	6
THE STUDENT, superior flavour... ...	0	6

RADISH.

CULTIVATION.—For early use sow in a sheltered border between February and March; these will require protecting during frosty weather. For succession sow as required till June. The Turnip-rooted varieties are the best for late crops. To have them tender and crisp the ground must be kept moist.

COOLING'S SCARLET FRAME.

Turnip Varieties.

SCORZONERA... . ... 1s.

SEAKALE (Seed).

CULTIVATION.—The soil for Seakale must be well trenched and manured. If grown from seed, sow in March and April in drills three feet apart and an inch deep. If roots are planted (which is much preferable) single plants should be placed nine inches apart, in rows three feet from each other. Seakale is easily forced in a warm cellar by putting some of the strongest roots in boxes or pots of soil and covering with litter.

LILY WHITE, considered to be far superior to the old variety, and more delicate in colour ... per oz. 1s.

ORDINARY VARIETY ... . ,, 9d.

For ROOTS, *see page* 23.

SPINACH.

CULTIVATION.—For an early summer crop sow *Round-Seeded* early in February in drills one foot apart, and thin out to two inches in the row. The *Prickly* kind is generally sown in August for winter and early spring use.

Round Seeded or Summer.

We test all our Seeds before sending out—disappointment from defective germination is therefore almost impossible.

TOMATO.

CULTIVATION.—The Tomato is rapidly growing in general estimation, and will probably soon be considered one of the most important of all garden vegetables, as it can be prepared in so many ways for family use throughout the whole year. Sow as required from January to March, and when the plants are about 2 inches high transplant into small pots—one plant to each pot—and set the pots into the hot-bed, by which process the plants are rendered more sturdy and branching. Transfer to the open ground as soon as all danger of frost is over, in hills four feet apart each way, having previously mixed a shovelful of well-rotted manure with the soil. Water freely at time of transplanting, and shelter from the sun for a few days until the plants are established. To hasten the maturity of the first fruits which sets, pinch off the tops and all the secondary shoots which afterwards appear above the flowers. Soil should be rich and light on a dry sub-soil.

SELECTED MUSHROOM SPAWN.

Our Improved Spawn produces large crops of thick fleshy Mushrooms.

CULTIVATION.—In making a Mushroom bed so much fresh horse-manure as will be required to make the bed 12 to 18 inches deep should be thrown into a heap to ferment; turn and mix it well together every three or four days. After it has been turned several times, say for a fortnight or three weeks, it will be fit to make the bed. Beat the manure well down to the depth mentioned above, and allow it to remain a day or two until sufficiently cooled for spawning. When the temperature of the bed is about 65° break the spawn into pieces about the thickness of a walnut, and place it into the bed 2 inches deep and 9 inches apart; cover with 2 inches of good soil, and again beat down. The Mushrooms should appear in about 5 or 6 weeks after spawning. Should the bed get very dry (but on no account otherwise) a slight watering with tepid water is beneficial; when the Mushrooms begin to appear tepid water may be given more frequently. Much disappointment often occurs in growing Mushrooms. To prevent this as much as possible, we have made arrangements for a supply of spawn from one of the best makers in the country; we can especially recommend it as being of the finest quality procurable, and feel convinced that when once tried no other make will afterwards be used.

Fresh English-made Spawn 4d. per brick.; bush. 5s. Trial Packet of 3 Bricks free by Parcel Post for 1s. 6d.

FRENCH MUSHROOM SPAWN.—This imported Spawn is gaining favour on account of the excellence of the Mushrooms it produces and its invariable good quality. Many amateurs who fail with the ordinary Spawn succeed with this.—Per box 3/.

SEED POTATOES.

Our Potatoes are grown specially for seed; all the most important varieties in the best districts of Scotland and Lincolnshire; they are very carefully selected, and may be relied upon as true to name and perfectly free from disease. Although we cannot compete with the prices asked for the ordinary market samples, which are sold for eating purposes, and which are too often bought and sent out in a mixed state for planting, yet we believe our prices will compare very favourably with those of other seedsmen who make Potatoes a speciality.

COOLING & SONS'
LAWN GRASS SEEDS
As supplied to the Royal Parks.

GRASS SEEDS can never be sown too thickly, as it is found that the thicker the seed is sown the finer will be the turf. March and April are the best months for sowing, and the quantity of seed usually sown is 80 lbs. to 100 lbs. per acre. If the ground is to be clothed thickly the larger quantity is recommended. The land should be rolled before and after sowing the seed. As many kinds of small birds are very fond of Grass Seeds, it may be well to give some protection for a short time till the plants are up. Carefully remove all weeds as soon as they make their appearance, and when the grass has grown a few inches high it should be mown with a scythe, and cut afterwards every ten days till October. A mowing machine should not be used the first season. **Frequent Mowing** and **Rolling** are necessary to keep the turf in good order, as a thick bottom grass cannot be procured and maintained without compression by frequent rolling.

To improve Old Lawns that are thin, about 20 lbs. per acre of Lawn Seed may be sown, raked in with a fine tooth-rake, and well rolled.

Begonia Roots for Bedding and Pot Culture.

The popularity and adaptability of the Begonia for Bedding purposes has led to its largely increased cultivation. During the summer beds of Begonias withstand the heavy showers and weather far better than Geraniums or Verbenas, and last far longer in flower. We are offering a very beautiful collection of both single and double kinds, in separate shades of colour, at prices really less than the cost of ordinary bedding plants. We strongly recommend their more extended use for out-door culture.

SINGLE VARIETIES.

New and Beautiful Varieties of Sweet Peas.

Great attention has been directed to Sweet Peas of late years, and perhaps in no other hardy flowers has there been recently such marked improvement as in this popular class of Annuals. By careful trials of our own, and watching other large trials, we have been enabled to revise our list and to include only the very large flowered and most distinct varieties, and we believe we offer a most representative collection. We have again added several desirable new varieties for this season, and the best of the Novelties exhibited at the Royal Horticultural Society's and other Shows.

CHOICE HYBRID GLADIOLUS.

For a rich and grand effect during the summer and autumn months, the many and beautiful colours of this splendid tribe of flowering bulbs form one of the most attractive features of the flower garden. They prefer a warm south border, but will grow in almost any situation in ordinary garden soil, which must be deeply dug and slightly enriched with well-decayed manure. The bulbs should be planted from 3 to 4 inches deep, and covered with sand to the depth of an inch, over which place the soil. By planting from February until April a succession of bloom will be produced from July till October.

AMERICAN HYBRID, Groff's Silver Trophy Strain. Comprising a most wonderful range of colours from white and cream to red, scarlet, and crimson, also lilac, heliotrope, and blue shades. Enormous flowers and spikes.

LILIUMS.

POT CULTURE.—As soon as the bulbs are received pot them, one in a 6-inch pot, or two or three in an 8-inch pot. Do not let the soil come within two inches of the rim of the pot. Place in a cold frame, and give water sparingly till growth appears. As the shoots increase give more liberal supplies, and when all danger of frost is past remove to a sheltered but light situation in the open air. About the beginning of July fill up the pots to within an inch of the rim with well-rotted manure. As soon as the buds are fairly developed afford the plants the protection of a glass roof or other shelter.

*The varieties marked * are the most suitable for pot culture.*

DOUBLE TUBEROSES.

These produce long spikes of double pure white flowers, exceedingly fragrant and invaluable for bouquets. The value of the *Excelsior Pearl* over other varieties consists in its flowers being of double the size, imbricated like a rose, and its dwarf habit, growing only from 18 to 24 inches in height. The bulbs should be potted firmly in rich loamy soil, and plunged in bottom heat, care being taken that the temperature does not fall below 60 degrees.
